(54) Title: REAMER GUIDE AND METHOD

(57) Abstract: A reamer guide is described for reaming a cavity within a tibia. The reamer guide comprises: a plate (4) having a circular aperture there through and defining a plane; and a disc (6) rotatably mounted in the aperture, the disc having a bushing (8) therein defining a reamer axis offset from the centre of the disc for receiving a reamer in use and in which the disc is rotatable about an axis transverse to the plane of the plate. Thus a cavity larger than the reamer can be accurately and easily formed.
